RESEARCH INTERESTS

My research primarily focuses on **natural language processing (NLP)**, **AI ethics**, and **computational social science (CSS)**. The central aim is to **design equitable NLP systems that are adaptable** to individuals and groups. Specifically, I enhance NLP system performance and equity by **integrating social context** into learning procedures. Additionally, I develop frameworks for **analyzing biases and fairness** in ML and AI systems, as well as bridging the gap between CS and CSS to **facilitate the use of cutting-edge AI models in other disciplines**, including social science.
